

DM-EXAMPLE

[REDACTED — author]
[REDACTED — author title]

DATE: [REDACTED — date of determination]

TO: [REDACTED — recipient offices]

SUBJECT: CUI Determination: [REDACTED — artifact] (NOT CUI)

OFFICE OF PRIMARY RESPONSIBILITY: [REDACTED — office of primary responsibility]

1. **Purpose**

2. This example shows the shape of a determination after redaction. The argument is intact and checkable; the specifics are gone. A reviewer can still tell whether the reasoning holds, which is the property worth preserving.

3. **Background**

4. The artifact under determination is [REDACTED — artifact]. It was produced by [REDACTED — office] for [REDACTED — audience].
5. The governing references are cited by number rather than restated. That is not a redaction — it is the normal practice for controlled documents, and it means a citation never has to be removed later.

6. **Analysis**

7. **Individually public facts can aggregate.** Two pieces of information that are each unremarkable may, together, state something that neither states alone. Determinations frequently turn on this, and the reasoning can be published even when the instance cannot.
8. **Structure is not sensitive.** Which fields a form has, what a process requires, and how a decision was reached are ordinarily releasable. What is sensitive is the populated instance. Redaction that removes the structure as well is over-redaction, and it destroys the document's usefulness without improving its handling.
9. **A marker is better than a gap.** [REDACTED --- recipient offices] tells a reader something was removed and what kind of thing it was. Silent deletion leaves them unable to distinguish redaction from oversight.

10. **Decision**

REDACTED — determination . The reasoning above stands on its own and can be reviewed without it.

11. **Conditions that reverse this determination**

12. Publishing these unchanged would be the error this example exists to avoid: a redacted determination is evidence of capability, not a template for the next real one. Start a real determination from `Decisions/_template.tex`.

13. **References**

14. `Decisions/_template.tex` — the shared memorandum template.

15. `Compliance-Marking/CUI/` — SF 901 cover sheet templates and marking examples.
