

DM-2026-007

Bruce Dombrowski
Systems Engineer, Payload Software Integration

DATE: April 13, 2026

TO: PSI Team, PIM, NASA JSC CUI Program Manager

SUBJECT: CUI Determination: Doc 8604 Rev D Blank Checklist Form

OFFICE OF PRIMARY RESPONSIBILITY: Payload Software Integration (PSI)

1. **Purpose**

This memorandum documents the formal determination that the **blank** Doc 8604 Rev D “C&DH / GDS / IT Security Coordination Meeting Checklist” PDF form is **not Controlled Unclassified Information (CUI)** and may be distributed without CUI markings or handling restrictions. This determination applies only to the blank, unfilled form as shipped from the source repository.

2. **Background**

Doc 8604 Rev D is a LaTeX-generated AcroForm PDF checklist used during the ISS Payload C&DH / GDS / IT Security Coordination Meeting. It contains 485 fillable form fields across 14 sections covering Legacy C&DH, Onboard Ethernet, KuIP Services, NTP, Anti-Virus, SSC Change Management, NAS Services, JSL, Visiting Vehicles, HOSC GDS, and HRDL. When a Payload Developer (PD) fills the form with payload-specific data (MAC addresses, IP addresses, KuIP identifiers, IT security configurations), the **filled** copy becomes CUI under the Export Controlled category (CUI//SP-EXPT//FEDCON). This distinction — blank vs. filled — drives different handling requirements.

A formal compliance assessment was conducted against authoritative sources (see Section 6) and is documented in `docs/compliance/` of the project repository.

3. **Applicable Standard**

32 CFR Part 2002.4 defines Controlled Unclassified Information as:

“information the Government creates or possesses, or that an entity creates or possesses for or on behalf of the Government, that a law, regulation, or Government-wide policy requires or permits an agency to handle using safeguarding or dissemination controls.”

Source: 32 CFR 2002.4, via Cornell LII (<https://www.law.cornell.edu/cfr/text/32/part-2002>), verified April 10, 2026.

4. Analysis

The blank Doc 8604 Rev D PDF contains the following categories of content:

- **Section headings** (e.g., “Section 5: Ku Band IP Services”) — publicly citable SSP document structure
- **SSP document numbers and paragraph references** (SSP 57000 I.3.5, SSP 52050 3.3.7, etc.) — publicly available document identifiers
- **Empty AcroForm fields** (text fields, checkboxes) — structure, not data
- **KuIP protocol names** (ICMP, SSH, FTPS, RDP, etc.) — IETF-standard protocol names, publicly known
- **“How to use” instructions and CUI Designation checkboxes** — procedural guidance
- **Applicable Requirements callouts** (per-section SSP paragraph citations) — references to the requirement, not the requirement text itself
- **DocuSign-style signature and initial placeholder boxes** — empty visual elements

Each category was tested against the CUI Registry definitions for:

- **SP-EXPT (Export Controlled):** No export-controlled technical data is present in the blank form. The form captures payload-specific technical data only when filled.
- **ISVI (Information Systems Vulnerability Information):** The blank form describes the *structure* of ISS C&DH interfaces but does not reveal specific vulnerabilities, configurations, IP addresses, or attack surfaces. SSP document numbers are publicly citable.
- **SP-CTI (Controlled Technical Information):** No technical data with military or space application beyond publicly available SSP paragraph numbers.
- **SP-PROPIN / PRVCY:** No proprietary business information or personally identifiable information.

Conclusion: No content in the blank PDF triggers any CUI Registry category. The blank form does not meet the 32 CFR 2002.4 definition of CUI.

5. Decision

The blank Doc 8604 Rev D checklist form is NOT CUI.

- The blank PDF may be distributed without CUI markings
- The blank PDF may be committed to private repositories accessible to authorized users
- The blank PDF may be emailed without encryption (though encryption is still recommended as good practice)

- The blank PDF carries the notice “THIS FORM CONTAINS CUI WHEN FILLED IN” per the NARA-recognized pattern for forms that become CUI upon completion

Once any payload-specific data is entered, the filled copy is **CUI//SP-EXPT//FEDCON** and must be:

- Stamped with compliant CUI banner via `tools/mark.cui.py`
- Distributed only via NASA ORBIT Files (preferred) or encrypted email
- Handled per 32 CFR Part 2002 and NPR 2810.7
